

Assignment IN_40Q

EE23BTECH11028 - Kamale Goutham

QUESTION

The signal $x(t) = (t - 1)^2 u(t - 1)$, where $u(t)$ is unit-step function, has the Laplace transform $X(s)$. The Value of $X(1)$ is

- 1) $\frac{1}{e}$
- 2) $\frac{2}{e}$
- 3) $2e$
- 4) e^2

(GATE 2022 IN 40)

Solution:

$$x(t) = (t - 1)^2 u(t - 1) \quad (1)$$

Taking Laplace-Transform:

$$t^n u(t) \leftrightarrow \frac{n!}{s^{n+1}} \quad (2)$$

if $X(s)$ is Laplace transform of $x(t)$ then,

$$x(t - t_0) = e^{-st_0} X(s) \quad (3)$$

using 2 and 3

$$(t - 1)^2 u(t - 1) \leftrightarrow \frac{2e^{-s}}{s^3} \quad (4)$$

$$X(s) = \frac{2e^{-s}}{s^3} \quad (5)$$

$$X(1) = \frac{2}{e} \quad (6)$$

\therefore 2 is Correct.

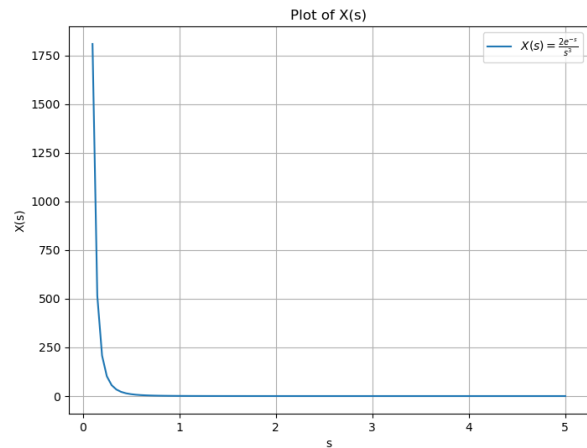

Fig. 1. $X(s) = 2e^{-s}/s^3$
