Assignment 11.9.5_6Q

EE23BTECH11028 - Kamale Goutham

Question

Find the sum of all two digit numbers which when divided by 4,yields 1 as reminder?
Solution: Input parameters are:

PARAMETER	VALUE	DESCRIPTION
$x(0)$	13	First term
d	4	common difference
$x(n)$	$[13+4n]u(n)$	General term of the series

TABLE I
Input Parameter TABLE

$$\text{x(n)} = x(0) + n\text{d} \tag{1}$$

$$\text{n} = \frac{\text{x(n)} - \text{x(0)}}{\text{d}} \tag{2}$$

$$n = \frac{97-13}{4} = 21 \tag{3}$$

$$X(z) = \sum_{k=-\infty}^{\infty} x(k) \times u(k) \times (z^{-k}) \tag{4}$$

$$R.O.C \quad |z| > |1| \tag{5}$$

$$X(z) = 13 \times (z)(z-1)^{-1} + 4 \times (z)(z-1)^{-2} \tag{6}$$

$$X(z) = \frac{13-9z^{-1}}{(1-z^{-1})^2}, |z| > 1 \tag{7}$$

$$y(n) = x(n) * u(n) \tag{8}$$

$$\implies Y(z) = X(z)U(z) \tag{9}$$

$$Y(z) = \left(\frac{13-9z^{-1}}{(1-z^{-1})^2}\right)\left(\frac{1}{1-z^{-1}}\right) \tag{10}$$

$$Y(z) = \left(\frac{13-9z^{-1}}{(1-z^{-1})^3}\right), |z| > 1 \tag{11}$$

Using contour integration to find the inverse z-transform,

$$y(21) = \frac{1}{2\pi j}\oint_C Y(z)z^{20}dz \tag{12}$$

$$= \frac{1}{2\pi j}\oint_C \left(\frac{(13-9z^{-1})z^{20}}{(1-z^{-1})^3}\right) \tag{13}$$

We can observe that the pole is repeated 3 times and thus $m = 3$,

$$R = \frac{1}{(m-1)!}\lim_{z\to a}\frac{d^{m-1}}{dz^{m-1}}\left((z-a)^m f(z)\right) \tag{14}$$

$$= \frac{1}{(2)!}\lim_{z\to 1}\frac{d^2}{dz^2}\left((z-1)^3\frac{(13-9z^{-1})z^{23}}{(z-1)^3}\right) \tag{15}$$

$$= \frac{1}{(2)!}\lim_{z\to 1}\frac{d^2}{dz^2}\left(13z^{23} - 9z^{22}\right) \tag{16}$$

$$= \frac{1}{(2)!}(13 \times 23 \times 22 - 9 \times 22 \times 21) \tag{17}$$

$$= 1210 \tag{18}$$

Therefore, the sum of all two-digit numbers that, when divided by 4, yield a remainder of 1 is 1210.

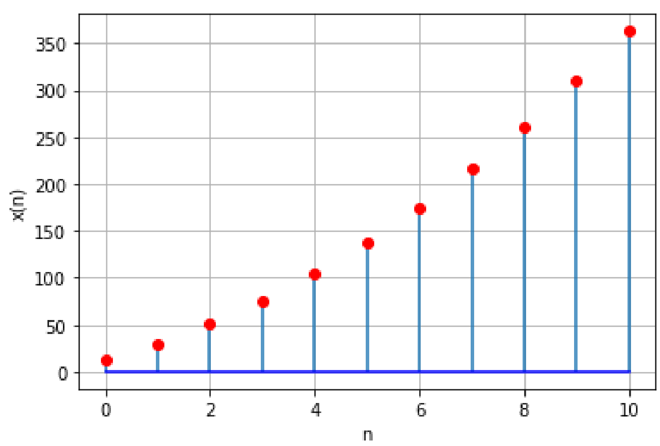

Fig. 1. y(n) = $13 + 15n + 2n^2$
